

Round 2: Heads Up

Advanced Division

Name: _____

A.2.1	Fireflies	15 points	A.2.10	Moon or Sun	20 points
A.2.2	Fireflies	45 points	A.2.11	Moon or Sun	35 points
A.2.3	Fireflies	200 points	A.2.12	Moon or Sun	135 points
A.2.4	Skyscrapers	25 points	A.2.13	Spiral Galaxies	25 points
A.2.5	Skyscrapers	35 points	A.2.14	Spiral Galaxies	50 points
A.2.6	Skyscrapers	110 points	A.2.15	Spiral Galaxies	140 points
A.2.7	Clouds	15 points			
A.2.8	Clouds	40 points			
A.2.9	Clouds	110 points			

Total: 1000 points

A.2.1 - A.2.3: Fireflies

For each circle in the grid, draw a path starting from its black dot, moving along the gridlines, and ending at a circle (including potentially the same one it started at), but not on the side containing another black dot. Paths may not cross themselves, each other, or pass through circles. A number in a circle represents how many turns the path exiting from its dot will make. All circles must be joined by paths to form one connected network.

Puzzle A.2.1 (15 points)

Puzzle A.2.2 (45 points)

Puzzle A.2.3
(200 points)

A.2.4 - A.2.6: Skyscrapers

Place a number from 1 to N into each cell so that each row and column contains every number from that range with no repeats, where N is the side length of the grid. Each number represents a skyscraper of its respective height. The numbers outside the grid indicate how many skyscrapers can be seen in the respective row or column from the respective direction; shorter skyscrapers are hidden behind taller ones. Some numbers may already be filled in for you.

Puzzle A.2.4 (25 points)

Puzzle A.2.5 (35 points)

Puzzle A.2.6 (110 points)

A.2.7 - A.2.9: Clouds

Shade some cells so that each orthogonally connected area of shaded cells is in the shape of a rectangle at least two cells wide and at least two cells tall. Rectangles may not touch each other, not even diagonally. A clue outside the grid indicates the number of shaded cells in the corresponding row or column.

Puzzle A.2.7 (15 points)

Puzzle A.2.8 (40 points)

Puzzle A.2.9
(110 points)

A.2.10 - A.2.12: Moon or Sun

Draw a non-intersecting loop through the centers of some cells which passes through each region exactly once. Within a region, the loop must pass through all moons and no suns, or all suns and no moons. A region containing only suns or only moons must have its clues passed through the loop may not pass through the same type of clue in two consecutively used regions.

A.2.10 - A.2.12: Moon or Sun

Draw a non-intersecting loop through the centers of some cells which passes through each region exactly once. Within a region, the loop must pass through all moons and no suns, or all suns and no moons. A region containing only suns or only moons must have its clues passed through the loop may not pass through the same type of clue in two consecutively used regions.

Puzzle A.2.11 (35 points)

Puzzle A.2.10 (20 points)

Puzzle A.2.12 (135 points)

A.2.13 - A.2.15: Spiral Galaxies

Divide the grid into regions of orthogonally connected cells. Each region must contain exactly one circle and have 180° rotational symmetry around it.

Puzzle A.2.13 (25 Points)

Puzzle A.2.14 (50 Points)

Puzzle A.2.15 (140 Points)
