

Round 2: Heads Up

Beginner Division

Name: _____

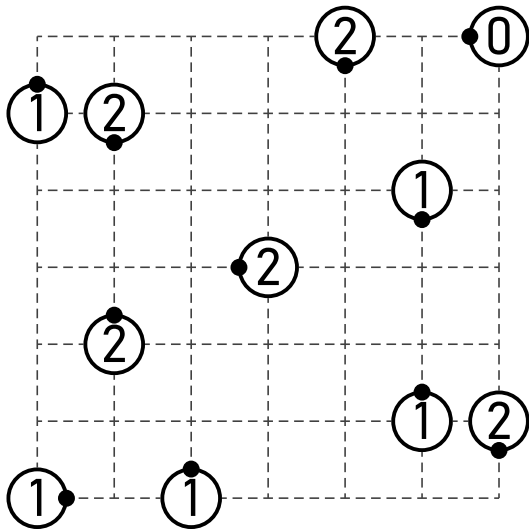

B.2.1	Fireflies	40 points	B.2.10	Moon or Sun	35 points
B.2.2	Fireflies	40 points	B.2.11	Moon or Sun	55 points
B.2.3	Fireflies	125 points	B.2.12	Moon or Sun	100 points
B.2.4	Skyscrapers	20 points	B.2.13	Spiral Galaxies	40 points
B.2.5	Skyscrapers	70 points	B.2.14	Spiral Galaxies	75 points
B.2.6	Skyscrapers	95 points	B.2.15	Spiral Galaxies	140 points
B.2.7	Clouds	15 points			
B.2.8	Clouds	35 points			
B.2.9	Clouds	115 points			

Total: 1000 points

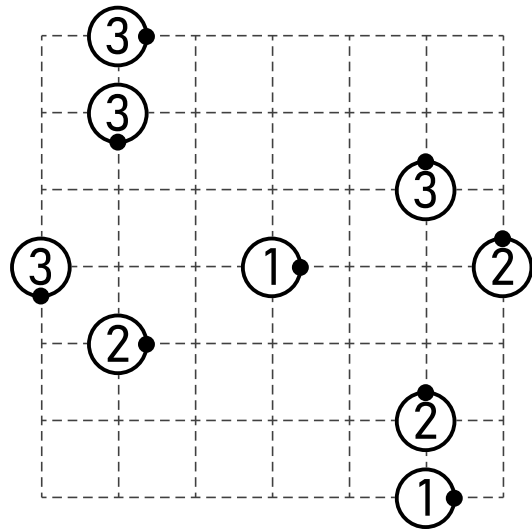

B.2.1 - B.2.3: Fireflies

For each circle in the grid, draw a path starting from its black dot, moving along the gridlines, and ending at a circle (including potentially the same one it started at), but not on the side containing another black dot. Paths may not cross themselves, each other, or pass through circles. A number in a circle represents how many turns the path exiting from its dot will make. All circles must be joined by paths to form one connected network.

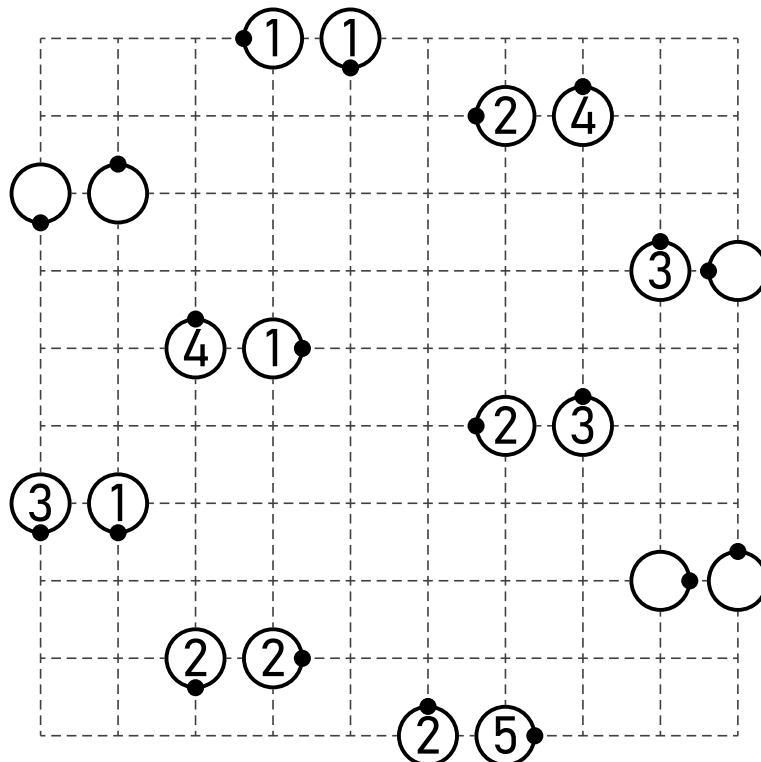

Puzzle B.2.1 (40 points)

Puzzle B.2.2 (40 points)

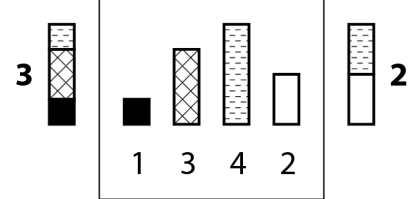

Puzzle B.2.3
(125 points)

B.2.4 - B.2.6: Skyscrapers

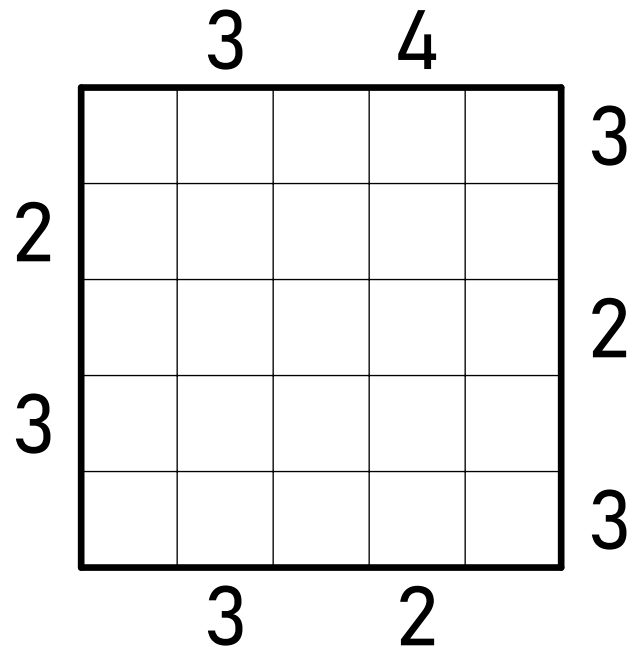

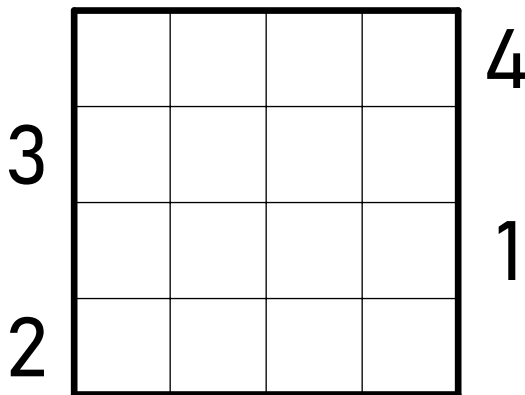

Place a number from 1 to N into each cell so that each row and column contains every number from that range with no repeats, where N is the side length of the grid. Each number represents a skyscraper of its respective height. The numbers outside the grid indicate how many skyscrapers can be seen in the respective row or column from the respective direction; shorter skyscrapers are hidden behind taller ones.

Some numbers may already be filled in for you.

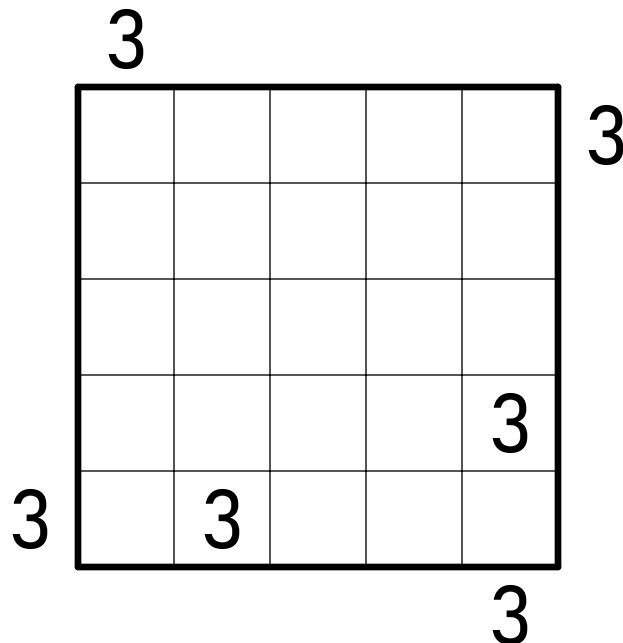

Puzzle B.2.5 (70 points)

Puzzle B.2.4 (20 points)

Puzzle B.2.6
(95 points)

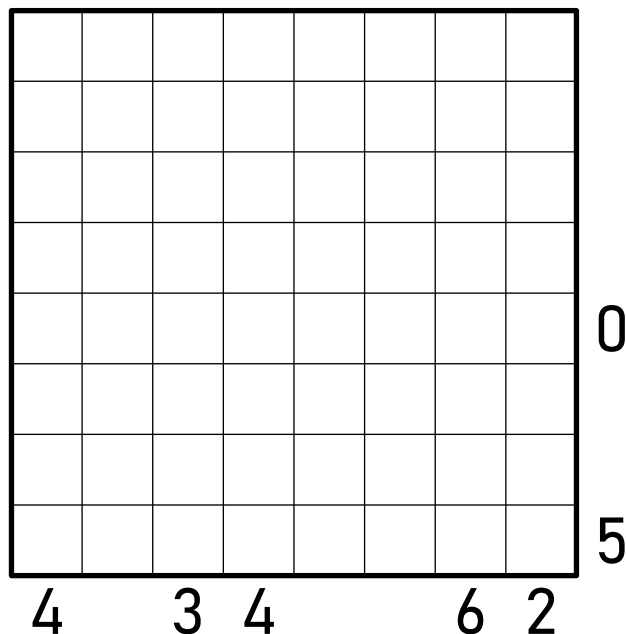

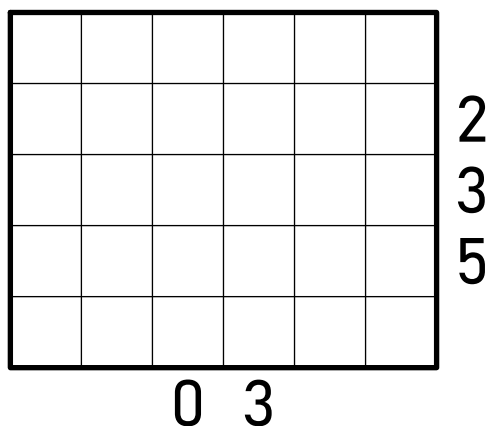

B.2.7 - B.2.9: Clouds

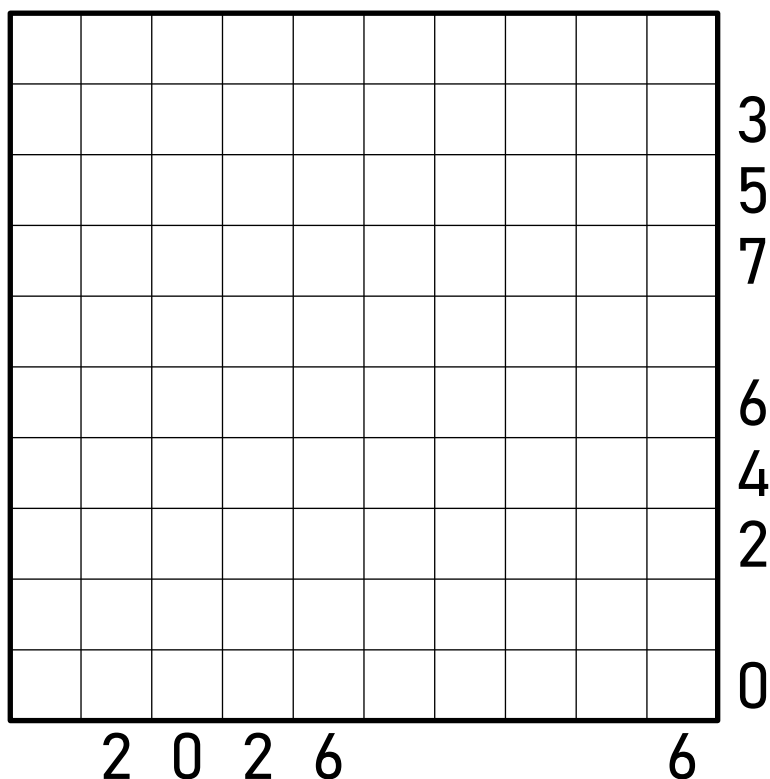

Shade some cells so that each orthogonally connected area of shaded cells is in the shape of a rectangle at least two cells wide and at least two cells tall. Rectangles may not touch each other, not even diagonally. A clue outside the grid indicates the number of shaded cells in the corresponding row or column.

Puzzle B.2.8 (35 points)

Puzzle B.2.7 (15 points)

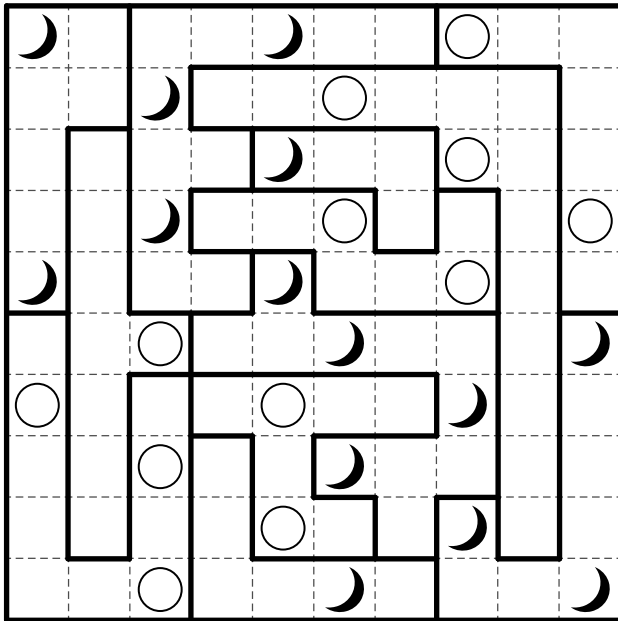

Puzzle B.2.9
(115 points)

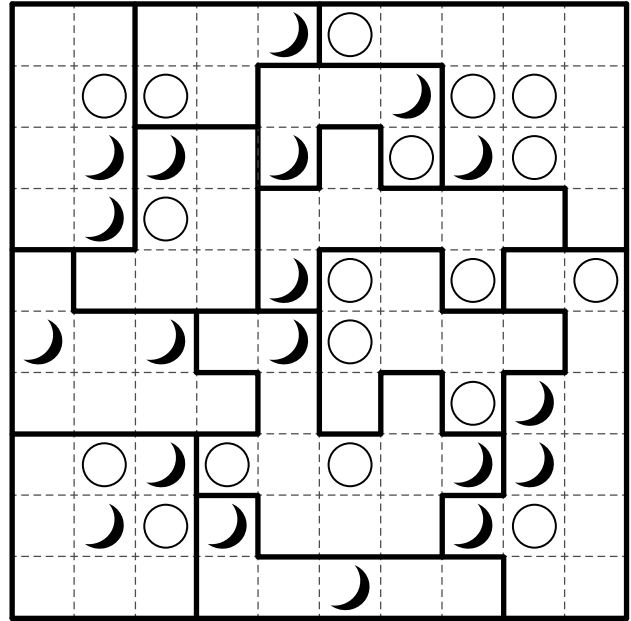

B.2.10 - B.2.12: Moon or Sun

Draw a non-intersecting loop through the centers of some cells which passes through each region exactly once. Within a region, the loop must pass through all moons and no suns, or all suns and no moons. A region containing only suns or only moons must have its clues passed through the loop may not pass through the same type of clue in two consecutively used regions.

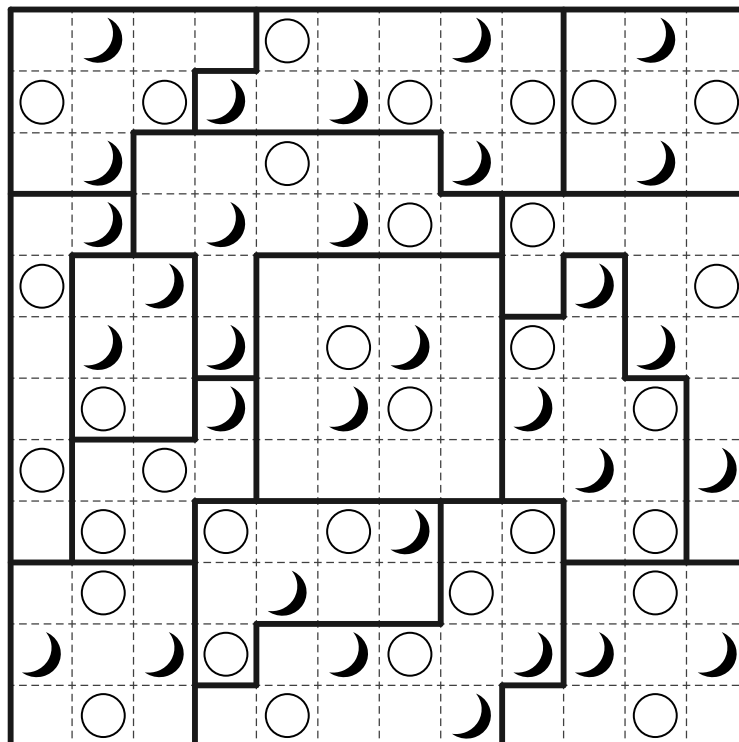

Puzzle B.2.10 (35 points)

Puzzle B.2.11 (55 points)

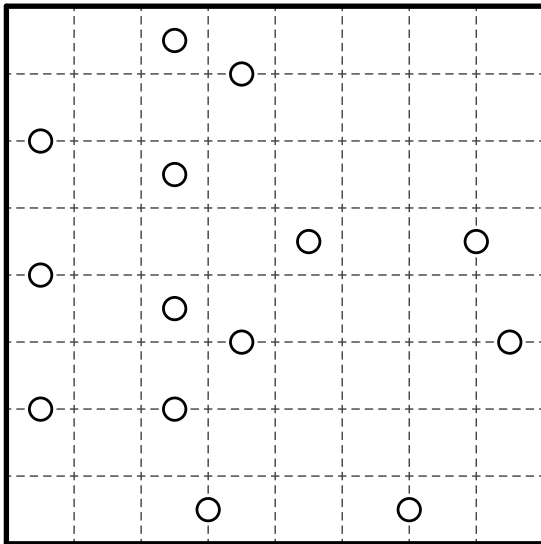

Puzzle B.2.12
(100 points)

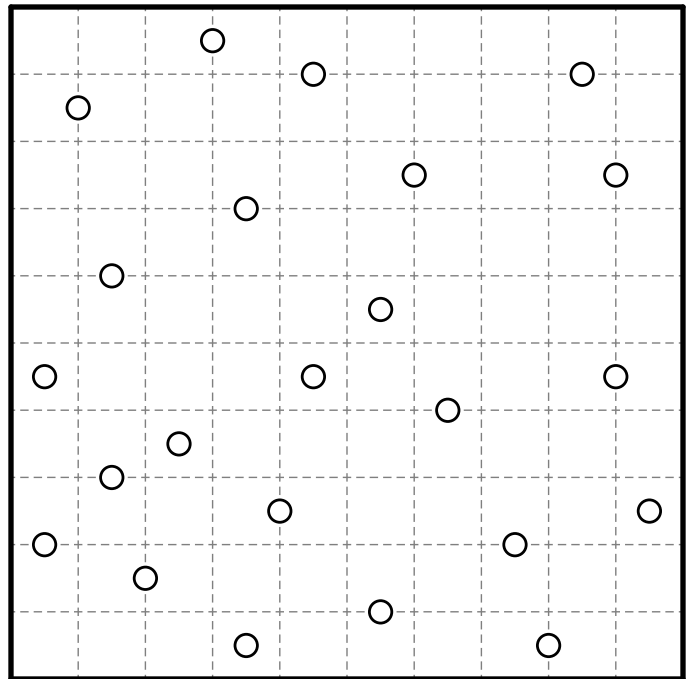

B.2.13 - B.2.15: Spiral Galaxies

Divide the grid into regions of orthogonally connected cells. Each region must contain exactly one circle and have 180° rotational symmetry around it.

Puzzle B.2.13 (40 Points)

Puzzle B.2.14 (75 Points)

Puzzle B.2.15
(140 points)
